MADE IN USA

Patent Pending

STEPS Absorbents

STEPS - is our new Patent Pending Product. Biodegradable, absorbent leather blend. Organically made with Horticulture Results.

STEPS - is environmentally friendly made product. Reduces our landfills and preserves our forests.

STEPS - absorbs three times its weight and keeps an absorbing.

STEPS - can be re-used and drained to recycle back fluids.

**100% Recycled
Eco Friendly**

Spill Control Kits

Spill Control Kit comes with everything you need to control an oil based spill and waste spill. Ideal for industrial use, repels water and absorbs oil based fluids.

Kits include;

3 – 40 inch socks, rags, heavy containment bag, gloves, labels, goggles, towel, clips and all the necessary items to contain petroleum spills.

We also make water absorbents for floods and clean

Oil spills can be catastrophic. In 1989 a ship ran aground in Alaska releasing 11 million gallons of crude oil. Over the next ten years an average of 150,000 tons of oil spilled in the world's waterways each year. Oil spills are still a problem.

One method is to soak up the oil with oil-absorbing booms. Many commercial booms are expensive they use polypropylene and don't have the oil-absorbing properties needed. Our patented products are less expensive and are more effective at absorbing oil spills than other products.
